

abrams clinical drug therapy pdf

Proton-pump inhibitors (PPIs) are a group of drugs whose main action is a pronounced and long-lasting reduction of stomach acid production. Within the class of medications, there is no clear evidence that one agent works better than another. They are the most potent inhibitors of acid secretion available. This group of drugs followed and largely superseded another group of medications with ...

Proton-pump inhibitor - Wikipedia

The MAOIs are infamous for their numerous drug interactions, including the following kinds of substances: Substances that are metabolized by monoamine oxidase, as they can be boosted by up to several-fold.; Substances that increase serotonin, norepinephrine, or dopamine activity, as too much of any of these neurochemicals can result in severe acute consequences, including serotonin syndrome ...

Monoamine oxidase inhibitor - Wikipedia

We conducted a randomized clinical trial to determine whether treatment of women with gestational diabetes mellitus reduced the risk of perinatal complications. We randomly assigned women between ...
