

### **automated trading in the pdf**

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

Trade involves the transfer of goods or services from one person or entity to another, often in exchange for money. A system or network that allows trade is called a market.. An early form of trade, barter, saw the direct exchange of goods and services for other goods and services. [need quotation to verify] Barter involves trading things without the use of money.
