In mathematics, a system of linear equations (or linear system) is a collection of two or more linear equations involving the same set of variables. For example,  $x + y = 1$ ,  $x + y + z = 1$ ,  $x + y + z = 1$  is a system of three equations in the three variables  $x$ ,  $y$ ,  $z$ . A solution to a linear system is an assignment of values to the variables such that all the equations are simultaneously satisfied.

In this section we'll start the chapter off with a quick look at some of the basic ideas behind solving higher order linear differential equations. Included will be updated definitions/facts for the Principle of Superposition, linearly independent functions and the Wronskian.

Numerical methods John D. Fenton a pair of modules, Goal Seek and Solver, which obviate the need for much programming and computations. Goal Seek, is easy to use, but it is limited with it one can solve a single equation, however complicated or however many spreadsheet cells are involved, whether the equation is linear or nonlinear.

v Chapter 15 covers additional ratemaking methods commonly used by commercial insurers. The methods are divided into two categories: those that alter the rate calculated from the rating manual and those that are employed by insurers to calculate a premium unique to a particular large commercial risk.
