

fundamentals of gas dynamics pdf

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases. It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...

2.1. Price of oil. A factor which may affect both the demand and the supply of gas is the price of oil. The price of oil is relevant because of substitution properties of gas and oil (Villar and Joutz, 2006). Substitution is primarily relevant in the electricity generation and the heavy industry.

Compressible flow (gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less than 0.3 (since the density change due to velocity is ...
