Implementation of High Availability High availability (HA) is not a standalone feature, but instead an approach to implementing a variety of interrelated features as tools to ensure business resilience and maintain end-to-end availability for services, users, devices, and applications. High availability should be incorporated at many layers. With

CHAPTER 16 IMPLEMENTING HIGH AVAILABILITY AND DISASTER RECOVERY 350 SQL Clustering i SQL Clustering is a common form of high availability where the goal is to have rapid failover when the SQL Server acting as the primary fails within the environment. SharePoint fully supports all databases residing on a SQL Cluster.

### **Implementing High Availability and Disaster Recovery**

Here are five automated strategies to help you implement high availability: 1. Application-Level Routing. In the event of a transaction failure, cloud-aware applications can be engineered to intelligently route

transactions to a secondary service point. A failed transaction query is automatically reprocessed at the secondary working location.

### **5 strategies for implementing high availability**

Abstract. This IBM® Redpaper® publication addresses topics for architects, brand specialists, distributors, resellers, and anyone developing and implementing SAP HANA on IBM Power Systems® integration, automation, high availability (HA), and disaster recovery (DR) solutions.
