Introduction. The Phase Vocoder [FlanG66, Dols86, LaroD99] is an algorithm for timescale modification of audio. One way of understanding it is to think of it as stretching or compressing the time-base of a spectrogram to change the temporal characteristics of a sound while retaining its short-time spectral characteristics; if the spectrogram is narrowband (analysis window longer than a pitch ...

Evolutionary Algorithms for MATLAB (incl. Genetic Algorithms and Genetic Programming) Evolutionary Algorithms are the common term used for algorithms based on principles of nature (evolution, genetic).

(incl. Genetic Algorithms and Genetic Programming)

MATLAB is a programming language developed by MathWorks. It started out as a matrix programming language where linear algebra programming was simple. It can be run both under interactive sessions and as a batch job. This tutorial gives you aggressively a gentle introduction of MATLAB programming ...

Simulink, developed by MathWorks, is a graphical programming environment for modeling, simulating and analyzing multidomain dynamical systems. Its primary interface is a graphical block diagramming tool and a customizable set of block libraries. It offers tight integration with the rest of the MATLAB environment and can either drive MATLAB or be scripted from it.

1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...
