Impulse J produced from time t 1 to t 2 is defined to be $J = \int_{t_1}^{t_2} F dt$ where F is the resultant force applied from t 1 to t 2. From Newton's second law, force is related to momentum p by $F = dp/dt$. Therefore, $J = \int_{t_1}^{t_2} dp = \Delta p$ where Δp is the change in linear momentum from time t 1 to t 2. This is often called the impulse-momentum theorem. As a result, an impulse may also be regarded as the change in ...

Atomic Structure - v5 (2017)

The popular theory of atomic structure at the time of Rutherford's experiment was the "plum pudding model". This model was devised by Lord Kelvin and further developed by J. J. Thomson. Thomson was the scientist who discovered the electron, and that it was a component of every atom. Thomson believed the atom was a sphere of positive charge throughout which the electrons were distributed, a bit ...

física para ciencias e ingenierías volumen 2 séptima edición DE Serway, Jewett DE ANTEMANO LES AGRADEZCO CUALQUIER INFORMACIÓN.

Solucionarios en Ingles

En un artículo de 1909, «En una Reflexión Difusa de las Partículas Alfa», [6] Geiger y Marsden describieron el experimento mediante el cual demostraron que las partículas alfa pueden ser dispersadas por más de 90° . En su experimento prepararon un pequeño tubo de vidrio cónico (AB) que contenía radio, y su apertura fue sellada con mica.
