Surface science is the study of physical and chemical phenomena that occur at the interface of two phases, including solid-liquid interfaces, solid-gas interfaces, solid-vacuum interfaces, and liquid-gas interfaces. It includes the fields of surface chemistry and surface physics. Some related practical applications are classed as surface engineering. ...

Wetting is the ability of a liquid to maintain contact with a solid surface, resulting from intermolecular interactions when the two are brought together. The degree of wetting (wettability) is determined by a force balance between adhesive and cohesive forces. Wetting deals with the three phases of materials: gas, liquid, and solid.

13th Conference on Solid State Chemistry. The SSC2018 will be a forum for the presentation of new research results in the area of solid state chemistry and also bridge the gap between scientific understanding and technical requirements and application, so that the enormous future potential of solid state chemistry, materials and technologies, is realized effectively.
