Gravimetric analysis describes a set of methods used in analytical chemistry for the quantitative determination of an analyte (the ion being analyzed) based on its mass. The principle behind this type of analysis is that once an ion's mass has been determined as a unique compound, that known measurement can then be used to determine the same analyte's mass in a mixture, as long as the relative ...

The typical diagram of this type is illustrated by the figure below. The diagram has two curves  $\hat{=}$  liquidus (equilibrium conditions of liquid phase with first solid crystals  $\hat{=}$  primary crystals) and solidus (equilibrium conditions of last liquid with nearly complete solid). Consider solidification of an alloy with concentration C. When the alloy temperature is higher than T<sub>L</sub>, single liquid ...

Chemically, guar gum is an exo-polysaccharide composed of the sugars galactose and mannose. The

backbone is a linear chain of  $\beta$ -1,4-linked mannose residues to which galactose residues are 1,6-linked at every second mannose, forming short side-branches.

On September 29th, Agilent launched a major Web update for our line of Genomics products. The products have moved from genomics.agilent.com to our main Agilent.com site, but it's not just a matter of shuffling the deck chairs. Industry experts, and our own experts re-organized and improved the content so that you find the trusted answers that you need for Genomics products like:
